

ABSTRACT OF THE DISCLOSURE

Disclosed is a device for separating objects from a quantity of objects located in a receptacle. In order to keep the constructional and technical effort of said device low while allowing for great tolerance regarding the dimensions or diameters of the objects, a pivotable flap is provided at the outlet of the receptacle for releasing an object that is to be separated while an element for retaining the remaining objects in the receptacle is provided above the flap in the direction of movement of the objects.
